*VIPL, Institute of Computing Technology, Chinese Academy of Sciences*

*Advisors: Prof. Shiguang Shan and Dr. Shuang Yang*

- Developed an audio-visual multi-modal fusion scheme to detect when each visible speaker in the video is speaking.
- Proposed an permutation-equivariant layer with the capability of processing all speakers in the scene simultaneously.

- Exploited the skew-symmetry of inter-speaker relations which not only has reasonable interpretation but also reduces memory usage and FLOPS.
- Conducted extensive experiments on multiple datasets (AVA-ActiveSpeaker, Columbia and RealVAD) with outstanding performance.
